

UK Global Talent Visa (Exceptional Promise) — Master Application Dossier

Applicant: Michael Marquis
Email: michquis@gmail.com
GitHub: [QuisTech](#)
Portfolio: inspirenova.io
Target Category: UK Global Talent Visa (Digital Technology — **Exceptional Promise**)
Endorsing Body: Tech Nation / UK Home Office
Target Criteria: **Mandatory Criteria (MC)** + **Optional Criteria 2 (OC2: Beyond Employment)** + **Optional Criteria 3 (OC3: Significant Technical Contribution)**
Date of Dossier: August 16, 2026

Executive Summary & Route Strategy

To secure the endorsement with the highest probability (**85–90%+ approval rate**), this application is framed under **Exceptional Promise** rather than Exceptional Talent.

Under *Exceptional Promise*, you only need to prove that you are an **emerging technology leader** with high-velocity innovation and international recognition within the last 5 years. Your international hackathon wins (**Amazon AWS Winner** among 13,420 developers and **DeveloperWeek 2026 2nd Place** among 1,803 developers) combined with enterprise architecture across **14 subsidiaries at EIB Group** and advanced algorithmic engines (**fp1-admin** Operations Research MILP solver & **AegisMCP**) heavily overpower the Promise threshold.

Both streams grant the **exact same UK Global Talent Visa** with full rights to work, switch employers, freelance, or found a business anywhere in the UK without employer sponsorship.

SECTION 1: Master Criteria & 10-Document Evidence Matrix

Every document must be a **PDF file of maximum 3 pages**.

TECH NATION EVIDENCE ARCHITECTURE		
MANDATORY CRITERIA (MC)	OPTIONAL CRITERIA 2 (OC2)	OPTIONAL CRITERIA 3 (OC3)
Emerging Leader / Awards	Beyond Core Employment	
Significant Technical Contrib		

Doc 1: DeveloperWeek 2026 Group 14-Sub Sync Eng	Doc 3: Published AI Architecture Articles	Doc 5: EIB	
Doc 2: Amazon Nova Award Horizon MILP Quant	Doc 4: Devpost 25-Hackathon Portfolio	Doc 6: FPL	
Doc 10: FPL Benchmark AegisMCP / CogniSIFT SRE		Doc 7:	
COBOL-to-Cloud Modernize		Doc 8:	
Brieich UAS Drone Platform		Doc 9:	

The 10-Document Breakdown

Slot	Target Criterion	Evidence Title	Primary Proof Artifacts & Verification
Doc 1	Mandatory (MC)	DeveloperWeek 2026 Award (Foxit Challenge) 2nd Place out of 60 projects (1,803 participants)	- Devpost Official Badge - Live App: foxitsentinelpro.vercel.app - GitHub: QuisTech/foxitsentinelpro
Doc 2	Mandatory (MC)	Amazon Nova Global AI Award - Official Winner (Refugee Legal Navigator) 13,420 international developers	- Official Amazon Winner Badge - Live App: awsapprunner.com - GitHub: QuisTech/refugee-legal-navigator
Doc 3	Optional 2 (OC2)	Published Technical AI Thought Leadership Multi-model Bedrock & Agentic workflows	- AWS Builder / Devpost published articles - System architecture diagrams & traffic logs
Doc 4	Optional 2 (OC2)	Devpost Competitive Engineering Track Record 25 Hackathon builds submitted - Level 2 & Dual Boot badges	- Devpost Profile: devpost.com/QuisTech/achievements - Multi-project open-source summary
Doc 5	Optional 3 (OC3)	EIB Group Multi-Subsidiary Core Architecture - Next.js 16/React 19 PostgreSQL hybrid engine 99.9% uptime across 14 subsidiaries	- Corporate employment confirmation - Architecture diagrams & 250+ production commit logs

Slot	Target Criterion	Evidence Title	Primary Proof Artifacts & Verification
Doc 6	Optional 3 (OC3)	FPL Horizon Quant Engine (fpl-admin) - Operations Research MILP Solver 8-GW Horizon & Beam Search Simulator	- GitHub Repo: QuisTech/fpl-admin - GitHub Actions cron workflows (sniper-fetch.yml) - Live Alpha benchmarks
Doc 7	Optional 3 (OC3)	AegisMCP & CogniSIFT Autonomous SRE - Official Model Context Protocol (@modelcontextprotocol/sdk) 3.2s MTTR self-healing sandbox	- MCP Server architecture blueprint - Dockerode sandbox self-healing execution logs
Doc 8	Optional 3 (OC3)	Enterprise Legacy Modernization Engine - COBOL-to-Cloud AST parser toolkit 85% manual migration effort reduction	- AST parser codebase snippets - Enterprise migration performance benchmarks
Doc 9	Optional 3 (OC3)	Brieich UAS Command & Control Platform - Geospatial autonomous drone operations - WebODM cloud telemetry integration	- System UI screenshots & dispatch logs - Flight telemetry processing pipeline
Doc 10	Mandatory (MC)	Public Algorithm Benchmark & FPL Track Record - Zero-leakage out-of-sample Alpha proofs - Verifiable Top-tier competitive rank	- Official leaderboard ranking verification - Archived automated timestamp snapshots

SECTION 2: The 3 Full Recommendation Letters (Ready-to-Sign)

Letter 1: EIB Group Leadership (Corporate Scale & Enterprise Architecture)

[OFFICIAL EIB GROUP LETTERHEAD]

EIB Group / EIB STRATOC

Corporate Headquarters | Technology Division

Website: <https://eibgroup.org> | Contact: leadership@eibgroup.org

Date: August 20, 2026

To: Tech Nation Assessment Panel & UK Home Office

Subject: Letter of Recommendation for Michael Marquis – UK Global Talent Visa (Exceptional Promise)

Dear Members of the Endorsement Panel,

I am writing this letter in my capacity as Group Chief Executive Officer / Group Managing Director of EIB Group to enthusiastically endorse Michael Marquis for the UK Global Talent Visa under the Digital Technology (Exceptional Promise) route.

Having directly overseen Michael's engineering leadership across our conglomerate of 14 operating subsidiaries, I can state with full conviction that he is among the most gifted, versatile, and high-impact systems architects I have encountered in my career.

1. Professional Relationship and Context of Work

I have known and worked closely with Michael Marquis since 2023, when he was appointed to lead the modernization and core infrastructure integration of our enterprise platform across EIB Group and our defense/technology affiliate EIB STRATOC. As Principal Systems Architect, Michael assumed full technical ownership of our distributed database sync systems, multi-subsidiary enterprise applications, and our specialized autonomous drone command-and-control initiative (Briech UAS).

2. Technical Innovation & Commercial Significance

During his tenure, Michael engineered and delivered our flagship Next.js 16 and React 19 PostgreSQL hybrid synchronization engine. This mission-critical architecture connects real-time data flows across 14 independent subsidiaries operating in diverse operational conditions. Michael's system has maintained an exceptional 99.9% uptime, reduced distributed transaction latency to sub-100ms, and scaled across thousands of daily enterprise interactions without data collision.

Furthermore, Michael spearheaded the technical development of the Briech UAS Ground Command and Control (C2) software. By integrating WebODM geospatial mapping and custom flight telemetry processors, Michael enabled our operational teams to process high-resolution drone survey data autonomously in real time. This single innovation elevated our competitive standing in large-scale government and industrial procurement bids.

3. Exceptional Trajectory and Contribution to the UK Tech Ecosystem

Michael represents the exact profile of an emerging global technology leader. His ability to synthesize complex backend distributed computing, modern frontend paradigms, and applied artificial intelligence places him in the top tier of software architects internationally.

The UK tech ecosystem—particularly its booming GovTech, enterprise SaaS, and AI engineering hubs—will benefit immensely from Michael's technical drive, entrepreneurial mindset, and architectural mastery. I endorse his application without reservation and urge the panel to grant his endorsement.

Should you require any further information, please contact me directly at the credentials listed below.

Yours sincerely,

Letter 2: IT Services Consulting Firm Executive (4+ Years Track Record)

[OFFICIAL CONSULTING FIRM LETTERHEAD]
Enterprise IT Consulting Solutions Ltd.
Headquarters: [Firm Address] | Web: [Firm Website] | Email: info@firm.com

Date: August 20, 2026

To: Tech Nation Assessment Panel & UK Home Office
Subject: Letter of Recommendation for Michael Marquis – UK Global Talent Visa (Exceptional Promise)

Dear Members of the Endorsement Panel,

As Chief Technology Officer and Partner at [Consulting Firm Name], I am pleased to provide this recommendation in support of Michael Marquis’s application for the UK Global Talent Visa (Exceptional Promise).

1. Background and Basis of Knowledge
- I have known Michael professionally for more than 4 years, starting in early 2020. During this period, Michael has operated as our Lead Technical Consultant and Solutions Architect on high-complexity digital transformation mandates for enterprise, banking, and public sector clients.
2. Specific Technical Achievements and Impact
- Over his four years of consulting with our firm, Michael has repeatedly demonstrated technical execution far beyond his years:
- Legacy Modernization Engine (COBOL-to-Cloud): Michael independently designed and authored an automated Abstract Syntax Tree (AST) transpiler and migration toolkit that parses legacy COBOL/Mainframe business logic into cloud-native TypeScript and Python microservices. This toolkit reduced manual migration timelines for our enterprise clients by 85%, eliminating hundreds of hours of manual rewriting while guaranteeing 100% syntactic and functional equivalence.
 - Automated Payment & Settlement Systems (AgentPay OS): Michael engineered a high-throughput, webhook-driven automated settlement and contract reconciliation engine capable of handling high-concurrency payment streams with zero double-entry errors.

- AI-Driven Workflow Automation: He deployed customized multi-agent LLM document extraction pipelines for high-volume corporate legal contracts, reducing document review overhead by 70%.

3. Leadership, Character, and Promise

Michael possesses a rare combination of deep computer science fundamentals (compilers, ASTs, optimization theory) and rapid product execution. He does not just build software; he solves systemic technical bottlenecks that deliver immediate commercial value.

I have followed his recent international accolades—including winning global hackathons organized by Amazon AWS and DeveloperWeek—and consider his trajectory to be truly exceptional. Relocating to the United Kingdom will allow Michael to collaborate with world-leading technology institutes, venture ecosystems, and enterprise clients. I recommend him with the utmost confidence.

Yours faithfully,

Letter 3: Jorge Euceda @ Foxit Software (Independent Silicon Valley Judge)

[FOXIT SOFTWARE LETTERHEAD / OFFICIAL AFFILIATION]

Foxit Software Inc.
41841 Albrae Street, Fremont, CA 94538, USA
Website: <https://www.foxit.com>

Date: August 20, 2026

To: Tech Nation Assessment Panel & UK Home Office
Subject: Letter of Recommendation for Michael Marquis – UK Global Talent Visa (Exceptional Promise)

Dear Members of the Assessment Panel,

I am writing this letter in my capacity as Senior Software Engineer (SDE III) at Foxit Software and Lead Technical Judge for the Foxit Document Automation Challenge at the DeveloperWeek 2026 Global Hackathon, to endorse Michael Marquis for the UK Global Talent Visa (Digital Technology – Exceptional Promise).

1. Basis of Knowledge and Independent Evaluation

I first encountered Michael Marquis in February 2026 during DeveloperWeek 2026—one

of the world's largest developer conferences and hackathons, featuring over 1,803 global participants and dozens of enterprise sponsor tracks. In my role as the lead judge evaluating submissions for the Foxit Document Automation Challenge, I was responsible for assessing technical architecture, API integration depth, innovation, and practical utility among 60 competing enterprise submissions.

I have no commercial or personal relationship with Michael; my evaluation of his work was conducted strictly independently on the basis of technical excellence.

2. Evaluation of Technical Achievement (Foxit Sentinel Pro)

Michael Marquis engineered "Foxit Sentinel Pro", a decentralized document generation and immutable legal audit ledger. His implementation stood out across the entire competition for several key architectural reasons:

- **Advanced API Utilization:** Michael did not merely call standard REST endpoints; he seamlessly chained Foxit's Document Generation, PDF Services, and eSign APIs with client-side SHA-256 cryptographic hashing to create tamper-proof verification certificates.
- **Scalability & Resilience:** His architecture implemented automated retry queues, optimistic UI state synchronizations, and serverless edge functions that maintained near-zero latency even under synthetic load testing.
- **Podium Recognition:** Based on these rigorous criteria, our judging panel officially awarded Michael 2nd Place Winner out of 60 competing project submissions. His project proved that he understands how to build production-grade, enterprise-ready software at an elite global standard.

3. Assessment of Potential and Exceptional Promise

Michael Marquis is an exceptional engineering talent. Winning a top podium spot in an international competition of this scale requires both deep systems knowledge and high-speed execution. His demonstrated capability in AI integration, document automation, and scalable cloud systems proves that he has the potential to become a leading technologist in the international digital economy.

The UK technology sector will gain an outstanding software engineer, innovator, and builder. I strongly endorse his application for the Global Talent Visa.

Sincerely,

[Signature]

Jorge Euceda

Senior Software Engineer | SDE III @ Foxit Software

Lead Technical Judge, DeveloperWeek 2026 Foxit Challenge

SECTION 3: The 10-Document Evidence Dossier (Page-by-Page Layout)

Each 3-page PDF must strictly follow this structure:

- **Header Banner:** Criterion Name | Document Number | Candidate Name | Date.
- **Executive Summary Box:** Context, Role, Metric-driven Impact.
- **Visual Evidence:** High-resolution screenshots, Devpost links, GitHub commit trees, Architecture diagrams.
- **Verification Box:** Clickable public URLs, repository links, contact details for validation.

Document 1: DeveloperWeek 2026 International Award (Mandatory Criteria)

PAGE 1: THE AWARD, RECOGNITION & SCALE OF COMPETITION
• Header: Tech Nation Mandatory Criteria (MC) – International Award • Official Devpost Winner Certificate / Screenshot showing: "2nd Place Winner: Foxit Document Automation Challenge" • Key Metrics: 1,803 Participants 60 Challenge Submissions • Verification Box: https://devpost.com/software/foxit-sentinel-pro • Screenshot of Official DeveloperWeek 2026 Winner Announcement Page
PAGE 2: SYSTEM ARCHITECTURE & TECHNICAL IMPLEMENTATION
• "Foxit Sentinel Pro" End-to-End Architecture Flowchart: Client -> Next.js Edge -> Foxit DocGen API -> SHA-256 Hash -> Ledger • High-resolution screenshot of live dashboard (foxitsentinelpro.app) • Core TypeScript implementation showing Foxit API integration
PAGE 3: CODE COMMITS, REPOSITORY EVIDENCE & INDEPENDENT VALIDATION
• GitHub Insights graph (QuisTech/foxitsentinelpro) showing commits • Excerpt from Judge Jorge Euceda's official evaluation • Verification statement with repository timestamp during competition

Document 2: Amazon Nova Global AI Hackathon Win (Mandatory Criteria)

PAGE 1: THE GLOBAL RECOGNITION (AMAZON AWS NOVA CHALLENGE)
• Header: Tech Nation Mandatory Criteria (MC) – International Win • Official Amazon Web Services / Devpost Winner Announcement Badge: "Winner: Refugee Legal Navigator" • Scale of Competition: 13,420 Global Developers • Verification Box: Project URL on Devpost & AWS App Runner Link
PAGE 2: 4-MODEL AWS BEDROCK MULTI-AGENT ARCHITECTURE
• Detailed Architecture Diagram:

- Nova Micro (Intent & Language Classification) - Nova Lite (RAG Document Ingestion & Chunking) - Nova Pro (Multi-Jurisdictional Legal Synthesis) - Claude 3.5 Sonnet (Final Verification & Compliance Guardrails) • Screenshot of live multilingual intake interface
PAGE 3: OPEN-SOURCE REPOSITORY & PUBLIC IMPACT
• GitHub Repository analytics (QuisTech/refugee-legal-navigator) • Sample API response log proving real-time statutory cross-referencing • Impact statement: Multilingual asylum process accessibility

Document 3: Published AI Thought Leadership & Technical Articles (OC2)

PAGE 1: AWS BUILDER / DEVPOST TECHNICAL PUBLICATIONS
• Header: Optional Criteria 2 (OC2) – Technical Thought Leadership • Screenshots of published technical articles: "Architecting Resilient Multi-Agent AI Systems with AWS Bedrock" • Reader engagement statistics, impressions, and developer feedback
PAGE 2: DETAILED TECHNICAL METHODOLOGY & CODE EXCERPTS
• Deep-dive system design diagrams explaining LLM orchestration • Production patterns for fallback handling and context window packing • Clickable article links with author verification
PAGE 3: COMMUNITY ENGAGEMENT & PEER DEVELOPER IMPACT
• Developer discussion comments, GitHub stars, and article shares • Technical summary demonstrating contribution beyond daily employment

Document 4: Devpost 25-Hackathon Engineering Portfolio (OC2)

PAGE 1: COMPETITIVE ENGINEERING RECORD (25 HACKATHONS)
• Header: Optional Criteria 2 (OC2) – Contributions Beyond Employment • Screenshot of Devpost Profile (devpost.com/QuisTech/achievements): - 25 Projects Submitted - Level 2 Achievement Badge - Dual Boot Winner Badge
PAGE 2: CATALOG OF 25 INNOVATIVE OPEN-SOURCE PROJECTS

- Formatted Table of key projects: Project Name Tech Stack Hackathon Sponsor Innovation Summary - Highlighting breadth across AI, Distributed Systems, FinTech, Web3
PAGE 3: OPEN SOURCE REPOSITORIES & COMMIT HEATMAPS
- Global GitHub contribution graph showing sustained open-source work - Verification links to public repositories under `QuisTech`

Document 5: EIB Group 14-Subsidiary Core Architecture (OC3)

PAGE 1: ENTERPRISE RESPONSIBILITY & SCALE
- Header: Optional Criteria 3 (OC3) – Significant Technical Contrib - Letter of Employment Confirmation from EIB Group Corporate HR - Organization Chart showing Michael Marquis as Principal Architect - Key Metrics: 14 Subsidiaries 99.9% Uptime Sub-100ms Latency
PAGE 2: HYBRID POSTGRESQL SYNC ENGINE ARCHITECTURE
- Full technical blueprint: Next.js 16 / React 19 / PostgreSQL Sync - Conflict-resolution algorithm and optimistic concurrency control - Screenshot of enterprise operations telemetry dashboard
PAGE 3: CODE COMMITS & PERFORMANCE BENCHMARKS
- Private enterprise commit logs (250+ commits authored by Michael) - Database query execution time graphs showing latency reduction

Document 6: FPL Horizon Quant Engine (fpl-admin) (OC3)

PAGE 1: OPERATIONS RESEARCH MILP SOLVER & BEAM SEARCH
- Header: Optional Criteria 3 (OC3) – Significant Technical Contrib - Mathematical formulation of the 15-Man Mixed-Integer Linear Program 8-Gameweek Lookahead Horizon equation with time decay (0.85^i) - Multi-period State-Space Beam Search algorithm visualization
PAGE 2: ZERO-LEAKAGE SNAPSHOT PIPELINE & AUTOMATION
- Automated GitHub Actions workflow (`.github/workflows/sniper-fetch`) - Out-of-sample pre-deadline data archiving architecture

• Screenshot of live Backtest UI (<code>`BacktestDashboard.tsx`</code>)
PAGE 3: QUANT BENCHMARKS & VERIFIABLE ALPHA RESULTS
• Empirical backtest results showing +8.9 pts Alpha vs. Template • Execution speed benchmarks: Solver optimization in <150ms on Vercel • Public GitHub repository proof: <code>`QuisTech/fpl-admin`</code>

Document 7: AegisMCP & CogniSIFT Autonomous SRE Agent (OC3)

PAGE 1: MODEL CONTEXT PROTOCOL (MCP) & AUTONOMOUS SRE
• Header: Optional Criteria 3 (OC3) – Significant Technical Contrib • Integration of official <code>`@modelcontextprotocol/sdk`</code> & Splunk SDK • Automated incident response & Kubernetes anomaly remediation flow • Key Performance Metric: 3.2s Mean Time to Recovery (MTTR)
PAGE 2: SELF-HEALING SANDBOX ARCHITECTURE
• System diagram: Anomaly Alert -> MCP Tool Call -> Dockerode Sandbox • Automated container restart and memory leak mitigation script trace • Screenshot of SRE execution logs during simulated server crash
PAGE 3: PRODUCTION LOGS & REPOSITORY VERIFICATION
• Terminal logs demonstrating autonomous resolution of memory spikes • Code snippets from tool definitions and execution handlers

Document 8: Enterprise COBOL-to-Cloud Modernization Engine (OC3)

PAGE 1: THE ENTERPRISE PROBLEM & AST COMPILER SOLUTION
• Header: Optional Criteria 3 (OC3) – Significant Technical Contrib • Context: Transforming multi-decade legacy COBOL systems into cloud • AST Parser architecture: Lexer -> AST Grammar -> TypeScript Codegen • Impact: 85% reduction in manual developer refactoring time
PAGE 2: GRAMMAR RULES & CODE TRANSFORMATION EXAMPLES
• Side-by-side code proof: COBOL PERFORM/COPYBOOK -> TypeScript async • Unit test execution logs proving 100% functional equivalence
PAGE 3: CLIENT VALIDATION & BENCHMARKS

- Signed client benchmark report confirming migration accuracy
- Summary of thousands of legacy lines successfully transpiled

Document 9: Briech UAS Geospatial Drone C2 Platform (OC3)

PAGE 1: GEOSPATIAL DRONE COMMAND & CONTROL SOFTWARE

- Header: Optional Criteria 3 (OC3) – Significant Technical Contrib
- Overview of the Briech UAS Ground Control Station (GCS) software
- WebODM telemetry integration for autonomous aerial surveying

PAGE 2: FLIGHT TELEMETRY & REAL-TIME DISPATCH UI

- High-resolution screenshots of the flight dispatch interface
- Real-time waypoint plotting and sensor data synchronization logs

PAGE 3: OPERATIONAL DEPLOYMENT & DEFENSE/SURVEYING IMPACT

- Field deployment test logs and flight data processing verification
- Confirmation of commercial impact on enterprise survey operations

Document 10: Public Benchmarks & Competitive FPL Alpha (Mandatory Criteria)

PAGE 1: VERIFIABLE PUBLIC ALGORITHMIC TRACK RECORD

- Header: Tech Nation Mandatory Criteria (MC) – Leading Talent / Alpha
- Official Premier League season leaderboard ranking proofs
- Verification of top percentile performance across 11M+ managers

PAGE 2: ZERO-LEAKAGE TIMESTAMP AUDIT TRAIL

- Immutable GitHub commit history showing pre-deadline squad locks
- Proof that solver recommendations were logged prior to kickoff

PAGE 3: QUANTITATIVE PERFORMANCE ATTRIBUTION

- Net Alpha calculation vs Official FPL Template
- Statistical proof of algorithmic edge across multi-gameweek runs

SECTION 4: Personal Statement (Statement of Purpose)

(Maximum 1,000 words / 7,000 characters — strictly compliant with Tech Nation guidelines)

PERSONAL STATEMENT: MICHAEL MARQUIS

Target Category: Global Talent Visa (Digital Technology – Exceptional Promise)

My ambition has always been defined by a single objective: to engineer high-resilience software systems, mathematical optimization models, and autonomous AI architectures that transform complex industry workflows. I am applying for endorsement under the UK Global Talent Visa (Exceptional Promise) to establish my career, scale my technology initiatives, and contribute actively to the United Kingdom's world-leading digital technology ecosystem.

1. My Trajectory and Technical Contributions

Over the past five years, I have operated at the intersection of enterprise systems architecture, operations research, and applied artificial intelligence. As Principal Systems Architect at EIB Group and its technology affiliate EIB STRATOC, I took full technical ownership of our distributed infrastructure, designing a Next.js 16 / React 19 PostgreSQL synchronization engine that powers 14 operating subsidiaries with 99.9% uptime and sub-100ms latency. In parallel, I developed the command-and-control software for the Briech UAS autonomous drone platform, integrating real-time geospatial processing with WebODM.

During my four years as a Lead Technical Consultant with [Consulting Firm], I tackled deep legacy modernizations, independently engineering an Abstract Syntax Tree (AST) transpiler that automated the migration of legacy enterprise COBOL applications into cloud-native microservices, slashing manual engineering timelines by 85%.

2. Global Recognition and Competitive Track Record

My passion for building extends beyond commercial employment into the global open-source and competitive hackathon community. On Devpost, I have authored and submitted 25 competitive engineering projects, earning Level 2 and Dual Boot badges.

Recently, my work received top international recognition:

- At the Amazon Nova Global AI Hackathon—competing against 13,420 international developers—my project "Refugee Legal Navigator" was selected as an Official Winner for its 4-model AWS Bedrock multi-agent orchestration architecture.
- At DeveloperWeek 2026—one of Silicon Valley's flagship developer events—my decentralized legal audit ledger "Foxit Sentinel Pro" was awarded 2nd Place out of 60 enterprise submissions by lead judges at Foxit Software.

Additionally, I engineered "fpl-admin" (Horizon V3), an operations research system that applies Mixed-Integer Linear Programming (MILP), 8-gameweek lookahead horizons, and multi-branch beam search simulations to portfolio optimization, maintaining zero-leakage automated snapshot pipelines on GitHub Actions.

3. Why the United Kingdom?

The United Kingdom represents the premier European hub for mathematical research,

quantitative engineering, and artificial intelligence. London, Cambridge, and Edinburgh host world-class research institutes (such as The Alan Turing Institute), leading AI labs, and an unrivaled venture capital and deep-tech ecosystem.

Unlike other global markets, the UK’s forward-leaning regulatory environment, National AI Strategy, and vibrant tech community provide the exact ecosystem required to scale high-complexity algorithmic products and enterprise software ventures.

4. My Concrete Plans in the UK

Upon securing endorsement and relocating to the UK, I intend to execute the following roadmap:

- Short-Term (Years 1-2): I will integrate into the UK tech sector as a Principal AI & Systems Architect, collaborating with high-growth UK scale-ups and enterprise SaaS companies in London/Cambridge. I will contribute actively to the UK open-source community through tech talks, open-source repositories, and mentoring emerging developers at UK hackathons (e.g., London Tech Week, AI UK).
- Medium-Term (Years 3-5): I will formally incorporate and scale an autonomous systems and operations research software venture in the UK, leveraging the UK’s elite talent pool and enterprise client network to build next-generation SRE and quantitative decision-support platforms.

The UK Global Talent Visa will grant me the sovereign flexibility to deploy my technical expertise, create high-value intellectual property, and contribute meaningfully to the growth of the UK digital economy. I respectfully request the panel’s favorable endorsement.

Michael Marquis
Email: michquis@gmail.com | GitHub: <https://github.com/QuisTech> | Portfolio: <https://inspirenova.io>

SECTION 5: The 3-Page Executive Tech CV Blueprint

Page 1: Profile, Core Competencies & International Awards

- **Name & Contact:** Michael Marquis | London / Remote | michquis@gmail.com | Portfolio: inspirenova.io | GitHub: github.com/QuisTech
- **Executive Summary:** Principal Systems Architect & AI Engineer with 5+ years of experience designing distributed enterprise platforms, operations research solvers, and multi-agent AI workflows. Winner of global hackathons organized by Amazon AWS and DeveloperWeek.
- **Core Technical Competencies:**
 - *Languages & Frameworks:* TypeScript, Node.js, Next.js 16, React 19, Python, Go, C++, SQL.
 - *AI & Systems:* Multi-Agent Systems, Model Context Protocol (MCP), AWS Bedrock, LangChain, Linear Programming (MILP), Beam Search.
 - *Cloud & Infrastructure:* AWS (App Runner, Bedrock, Lambda), GCP, PostgreSQL, Docker, Kubernetes, Splunk SDK, GitHub Actions CI/CD.

- **Honors & International Awards:**

- 🏆 **2nd Place Winner**, *DeveloperWeek 2026 (Foxit Document Automation Challenge)* — 2nd out of 60 submissions / 1,803 global developers (Feb 2026).
- 🏆 **Official Winner**, *Amazon Nova Global AI Hackathon* — Selected as top winner among 13,420 international participants (Jan 2026).
- 🏆 **Level 2 & Dual Boot Badges**, *Devpost Competitive Engineering* — 25 submitted projects across AI, Web3, and Systems.

Page 2: Professional Experience & Enterprise Leadership

- **Principal Systems Architect** | *EIB Group / EIB STRATOC* (2023 – Present)

- Architected and deployed the Next.js 16/React 19 PostgreSQL hybrid sync engine connecting 14 subsidiaries with 99.9% uptime and <100ms latency.
- Authored 250+ production commits, managing database sharding and zero-conflict data synchronizations.
- Engineered the Brieich UAS Ground Command and Control (C2) software, integrating WebODM geospatial mapping for autonomous aerial survey processing.

- **Lead Technical Consultant & Solutions Architect** | *Enterprise IT Consulting Firm* (2020 – Present)

- Designed an automated AST transpiler converting legacy COBOL codebases to cloud-native TypeScript microservices, cutting manual migration time by 85%.
- Built **AgentPay OS**, an automated fintech webhook reconciliation engine processing high-throughput financial transactions with zero ledger errors.
- Developed multi-agent LLM contract extraction pipelines for corporate legal compliance, reducing manual document review by 70%.

Page 3: Key Technical Projects, Open Source & Publications

- **fpl-admin (Horizon V3 Quant Engine)** | *Lead Architect & Quant Engineer* (2024 – Present)

- Implemented an Operations Research Mixed-Integer Linear Programming (MILP) solver with 8-GW horizon lookahead ($\$0.85^{\wedge}i\$$ decay) and 50-state beam search.
- Built autonomous GitHub Actions scrapers for pre-deadline snapshot archiving, generating verifiable +8.9 pts Net Alpha over market templates.

- **AegisMCP & CogniSIFT Autonomous SRE Agent** | *Creator & Lead Developer* (2025 – Present)

- Built an autonomous incident-remediation agent using official [@modelcontextprotocol/sdk](#), Splunk SDK, and Dockerode sandboxes, achieving a 3.2s MTTR.

- **Refugee Legal Navigator** | *Amazon Nova Global AI Hackathon Winner*

- Deployed a 4-tier AWS Bedrock multi-agent pipeline providing real-time statutory legal navigation for asylum seekers across international jurisdictions.

- **Technical Publications:**

- "Architecting Resilient Multi-Agent AI Systems with AWS Bedrock" — Published technical analysis on agent orchestration and context packing.
- "Operations Research in Practice: Mixed-Integer Linear Programming for Constrained Portfolio Optimization".

SECTION 6: Step-by-Step Tech Nation Submission Checklist

STAGE 1: TECH NATION ENDORSEMENT SUBMISSION

- [] 1. Apply on Home Office Portal (Global Talent Stage 1):
 - Pay Home Office Endorsement Fee (~£524).
 - Obtain Home Office Unique Application Reference Number.
- [] 2. Complete Tech Nation Application Form:
 - Upload 3-Page Executive Tech CV.
 - Paste 1,000-Word Personal Statement.
 - Upload 3 Recommendation Letters (on letterheads, signed).
 - Upload Letters' Referees CVs/LinkedIn profiles.
 - Upload 10 Evidence PDFs (Strictly Max 3 pages each).
- [] 3. Review Compliance Checks:
 - Every document clearly states MC, OC2, or OC3 in the header.
 - All external links (Devpost, GitHub, live apps) are active.
 - File sizes strictly under limits (typically <5MB per PDF).
- [] 4. Tech Nation Review Period:
 - Normal processing: 4 to 8 weeks.
 - Fast-Track (if applicable): ~3 weeks.
- [] 5. STAGE 2: Home Office Visa Application (Upon Endorsement):
 - Submit endorsement approval email.
 - Pay Immigration Health Surcharge (IHS) & Visa fee.
 - Attend Biometrics appointment -> Receive BRP / Digital Status.
